

MWMM

MOBILE WORKFORCE MANAGEMENT SYSTEM

MWM - Mobile Workforce Management Software

MWM is a real-time smart solution for industry businesses with employees in the field and factory production environment. Comprehensive Mobile Workforce Management software provides powerful field service planning and workforce tracking and is designed for field service optimization and task scheduling.

Field supervisors benefit from providing their input directly in the field while having all the data available in real time on the mobile application, seamlessly synchronized with the web application and back office. Workers schedules can be updated dynamically in response to real-time events and service engineers can be automatically directed to their next job.

Initially developed to organize welding and assembly workers by tasks and activities, application can be adapted to any other industry sector or service depending on customer requirements.

- Designed for difficult working conditions for a mobile device
- Work from anywhere (with or without internet access)
- Mobile and web application are synchronized

Application Objectives:

- Project management
- Human resource management
- Task management
- Documentation review
- Reports and statistics

Application Goals:

- Reduce administration tasks
- Web and mobile application synchronization
- Work from anywhere (online and offline mode)
- User friendly application design

Solution:

- Web application – browser platform
- Android mobile software

Application Features

WEB Application:

- Project management
- Supplier management
- Client management
- Employee management
- Application user management
- Employee time-sheet reporting
- Task management
- NCR “NonConformity Report”
- Documents management (PDF, DWG, Excel, etc.)
